

MiniChat Project II - The Return

The project is a **Chat Web App**, groups will be set *randomly*. What you need, is what you already learn : HTML, CSS, PHP, MySQL et JS !

You will use the framework Material Design Light. A skeleton file `index-skeleton.php` is available in the root of this repository, you have to follow functional specifications.

This topic is loosely based on OpenClassrooms - TP : un mini-chat.

Functional Specifications (already write)

- French version
- English version
